About Us

For 23 years techlectric have been serving clients all across Western Canada. Primarily based in Lloydminster, Alberta now Techlectric still helps and services clients in a broad geographical region.

Techlectric has successfully completed electrical installation projects large and small with utmost customer satisfaction. Our expertise, honed by two decades of experience and dedication includes commercial, institutional facilities, and multi-million dollar residential based developments. Each project commands the same care and attention from a core group of well-trained technicians, journeymen and apprentices, equipped with the proper tools and quality material to do the job right. For experience, quality and service look to Techlectric to complete on time and on budget.

TechSmart Design Build

Techsmart.ca

A TechSmart Design Build is a total electrical Project Delivery System that is goal orientated to deliver to the customer a project that;

- Saves Energy
- Enhance Comfort
- Set the Workplace Atmosphere
- Create Convenience
- Increase Workplace Productivity
- Improve Safety & Security

This system is focused to minimize project risks for the Owner/General Contractor and to reduce the delivery schedule by overlapping the design phase and construction phase of the project.

The traditional approach for electrical projects consists of the appointment of a designer on one side, and the appointment of a contractor on the other side. The design-build procurement route changes the traditional sequence of work. It answers the client's wishes from a single-point of responsibility in an alleged attempt to reduce risks and overall costs.

Why is a TechSmart Design Build Cost Effective?

There are four simple steps in the Design Build Project Delivery System to start the **project efficiently. The first step is to meet** with the Owner, General Contractor and **through a consultation process defines the** vision, scope of work and expectation of the project. More importantly during this process, TechSmart Design Principals are introduced to the design team to incorporate. The second step is to provide a price based on the design from the consultation process and to have in place an agreement in principal.

The TechSmart Design Build process is always **flexible giving the Owner/General Contractor** with the opportunity to make additions or deletions throughout the design process. The third step is to provide drawings for permit approvals. Depending on the complexity of project, drawings may or may not require an **Electrical Engineer stamp. The final fourth** step of the project is to commence on the work and complete on time and on budget.

The TechSmart Design Build process substantially reduces time and money spent on consultant expenses and the bid/tender process.

TechSmart Advantages

TechSmart Saves Costs and Time

TechSmart Whole Building Automation

Most buildings today are over-lit because light levels are set higher than appropriate for the space, or spaces are lit even when they are unoccupied. This wastes energy, creates discomfort, and reduces productivity. Make your building work harder for you by adding **intelligent, energy-efficient light control.**

TechSmart provides flexible, scalable systems that can fully integrate lighting, shading, and sensors for maximum energy savings. These solutions can be easily designed, installed **and reconfigured to meet the changing needs** of your building.

Reduce Heating & Cooling Costs

Lighting generates heat, and cooling systems must compensate for this heat gain. By dimming the lights you can reduce the load on the cooling systems and realize both lighting and HVAC energy savings. With TechSmart's Shading Solutions you are able to adjust window shades based on the sun's position throughout the day, leading to 10-30% reduction in solar heat gain.

TechSmart - Total Control

Techsmart.ca

Daylight Control

Whether you want to daylight harvest the **energy-saving benefits of daylight sensing** or reduce heat gain and glare with automated **shades, TechSmart provides many flexible solutions to maximize the efficient control of** daylight.

Centralized Control

TechSmart is able to provide whole building solutions utilizing Lutron, Control 4, HAI, and RTI thus allow facility managers to conveniently manage both electric light and daylight right from their desktops, touchscreens, Smart Phones or iPads. **Control, configure, monitor, and report on** the lighting for any space in your building **for maximum energy efficiency, comfort, and** productivity.

Improve Safety & Security

Create a safe, welcoming atmosphere in your commercial space no matter what time of day. The right light control help ensure employee safety and security. Scheduling with an internal timeclock control can turn a building's lights on and off, set lighting levels for different times of day, and change the lighting **profile for an after-hours mode. Occupancy/** vacancy sensors can dim the lights when not occupied, to alleviate employee concerns while saving energy.

Many TechSmart solutions incorporate an integral timeclock feature that enables the scheduling of lights and shades. Both time-of-day (e.g., 8:00 pm weeknights) and astronomic time clocks (e.g., dusk or dawn) can enhance energy savings and the safety and security of employees. Whether it's creating a safe pathway of light for employees exiting a building or automatically lowering shades during peak daylight periods, TechSmart scheduling solutions are a smart decision for any building owner.

Integrate emergency lighting into the overall system to provide the right light and simplify the lighting plan.

TechSmart - Total Control

Techsmart.ca

Integration & Connectivity

TechSmart is committed to providing best-in-class products and solutions that offer superior performance, with world-class service and support. Whether it's the seamless integration of light and shade control products, or integration with third-party products and systems, TechSmart solutions present the reliability and convenient control required for today's demanding applications.

With products ranging from dimmers and lighting control systems, to sensors and window systems, TechSmart solutions are designed to provide reliable integration across all of our product platforms.

Control temperature from keypads, mobile devices, occupancy sensors, and an energy-saving schedule. The three-part design puts each component where it makes sense.

Our factory trained technicians are fully **capable and certified to provide the Owner** a professional system designed for many years of reliability. A system that is also given thought for future expendability and change.

TechSmart - Shading Control

Techsmart.ca

Shading Control

Sunlight invigorates the workplace, but can also decrease productivity with glare and over-heating spaces. Regulate daylight in commercial spaces with a shading solution designed to optimize comfort and lower energy costs.

Daylight has a quality that we respond **to emotionally. Colors read true, finishes** reveal their texture, and an uplifting quality pervades any room bathed in daylight. As we become more conscious of our carbon footprint on this planet, we realize that making the most of daylight in our homes simply makes sense. Utilizing daylight reduces our need for electric light, and saves energy. Shading systems provide precision control of daylight – all at the touch of a button.

Sivoia QS Wireless offers precision control of shades in one room, multiple rooms, or **an entire office or building all at the touch** of a button. Sivoia QS Wireless directly integrates with Lutron lighting control systems, delivering total light control to any space. Having a total wireless system greatly reduces installations costs and making them **easy to retrofit into existing buildings.**

Save Energy

Utilize your shading system to save additional energy beyond routine use of shades. "Winter warm" opens the shades, taking advantage of sunlight warming a southern façade. "Summer cool" does the opposite by lowering shades and blocking solar heat gain, thereby reducing your cooling costs. In addition, shading fabrics are made from sustainable materials for complete environmental and energy savings.

Design Build - Generate Cost Savings.... Techsmart

TechSmart

Design Build Projects Equals Cost Savings

A Design Build Project with Techlectric will save substantial dollars to the project by having Techlectric design your electrical & low voltage system complete with stamped engineered drawings if required. You will save money with;

- Cost effective solutions for the project's electrical & low voltage needs utilizing the industry's latest in technology and design products and yet remaining practical and cost effective.
- Competitive priced high performance and labour reducing product and material selection.
- Save on Electrical Engineer consultation and design fees.
- Save on the cost and time of completing an electrical tender.
- **We offer design flexibility for electrical modifications with ease and simplicity without** the costly consultation with consultants normally required with the Change Order process.
-

Our electrical & low voltage designs are not only planned for your needs today, but we also put thought into future growth and technologies that you may implement down the road.

Design Build - Effective Time Management....

Techsmart.ca

Why We Do It Well? Complete Diversity!

On-site coordination and attention to detail are the keys to ensuring a project is completed successfully on time and on budget. We work closely with the Design Build Team, architects, interior designers and other project partners to meet everyone's expectations.

Our success in our projects also comes from our complete diversity of electrical and low voltage certified experienced apprentices, technicians and Gold Seal Intern project managers who are bonded, licensed and highly detail oriented. They make sure the work is done on time and on budget. With over two decades of experience, you can be confident in Techlectric.

Get in touch with Techlectric for your next electrical Design Build project. Contact Techlectric, a project manager will be happy to assist you.

TECHLECTRIC

Integrating Tomorrow's Technology...Today

Energy Smart and Security

Techsmart.ca

TechSmart is total energy management!

By controlling temperatures, lighting, and blinds based on time of day or occupancy, TechSmart can reduce energy costs. TechSmart control systems offer convenient control of energy management with Touchscreens, the Internet, web-enabled phones, tablets, laptop computers or the home telephone.

TechSmart Data

Techlectric is certified in all your data cabling needs, from Cat 5 or 6 to Fiber Optics cabling. We do it right!

Keep a watchful eye around your building!

Security, surveillance and access controls today is a standard installation in buildings. Cameras protecting the property provides a deterrent to vandals and to crime.

Building access controls are also integrated into the security system, permitting only authorized personnel to enter after hours and into critical areas of a plant or business.

Service Orientated

Techsmart.ca

Techlectric is about Service!

We pride our Service on highly competent and efficient people who provide utmost customer satisfaction. Our customer work order records are tracked on the Cloud system so that historical data is accessible by our technicians in the field. Backed with professional administrative support staff and our dedication of performing both on-site and off-site aspects of the job, Techlectric is able to deliver the highest quality with a high safety standard.

Techlectric The Right Choice!

Choose Techlectric for your next electrical or low voltage project. Techlectric is a proven well rounded and diversified company that can meet all your needs from commercial, industrial, institutional and residential electrical and many voltage systems as a licenced & bonded certified contractor and systems integrator.

Built on over two decades of experience, Techlectric Construction Company Ltd. is the entire regions most experienced, diversified, Design Build Turn Key Electrical Contractor. Offering a broad range of products and services second to none with unparralleled service. Techlectric management are accredited CCA Gold Seal Interns ensuring true proffesionalism on every project. Serving Clients from Lloydminster south to Wainright, East to North Battleford, West to Vegerville and North to Cold Lake and Bonnyville.

As members of the Lloydminster Construction Association, the Alberta and Saskatchewan Construction Associations and the Canadian Construction Association we are committed to maintaining industry standards and Integrity. We are fully equipped to handle any electrical or low voltage task and take great pride in the quality of our work.
